

Design Plan

Phase Architecture

A structured, phase-gated approach to the AyuVinc identity system. No phase advances without explicit approval. No symbols generated without need. Restraint before execution.

Status: Phase 1 Ready

Phases: 6 total

Prior batches: superseded

May 2026

AWAITING PHASE 1 GO

CORE PRINCIPLE

"Restraint is more important than creativity at this stage."

IDENTITY MODEL

"Infrastructure layer, not a product brand. Institutional, not startup."

DEVANAGARI INTENT

"Architectural integration. Cultural continuity layer. Not a translation."

01 — PHASE ARCHITECTURE

PHASE 01	Typographic System Before any logos. Define the typographic infrastructure: English type direction, Devanagari pairing, tracking and spacing logic, weight hierarchy, bilingual lockup alignment rules, uppercase / camelCase exploration, and institutional tone. This is the foundation everything else inherits. ENGLISH TYPE DIRECTION DEVANAGARI PAIRING TRACKING / SPACING LOGIC WEIGHT HIERARCHY BILINGUAL ALIGNMENT RULES CASE EXPLORATION INSTITUTIONAL TONE	STATUS Ready to build GATE Approval required before Phase 2
PHASE 02	AyuVinc Wordmark Text-only. 3–5 wordmark directions showing spacing variations, weight systems, and institutional tone differences — with written rationale for each. No icons. No geometric marks. No abstract symbols. Power comes from typography, spacing, and confidence alone. 3–5 TEXT-ONLY DIRECTIONS SPACING VARIATIONS WEIGHT SYSTEM INSTITUTIONAL TONE RATIONALE PER OPTION	STATUS Blocked on Phase 1 GATE Approval required before Phase 3

PHASE 03	Module System Architecture Before designing Dhara, Vaani, Setu individually — define the shared logic. One geometric language. One composition system. Bilingual rules that all three modules inherit. How they relate to AyuVinc. How they signal "division of a system," not "separate products." Minimal differentiation logic. SHARED GEOMETRY LANGUAGE MODULAR IDENTITY RULES BILINGUAL COMPOSITION INFRASTRUCTURE RELATIONSHIPS DIFFERENTIATION LOGIC	STATUS ● Blocked on Phase 2 GATE Approval required before Phase 4
PHASE 04	Module Identitiesधारा · वाणी · सेतु Build Dhara, Vaani, and Setu individually — each inheriting the approved system DNA from Phase 3. Shared architectural logic, minimal differentiation only. No literal symbolism. No separate brand personalities. They should feel like three strata of one operating system. DHARA · धारा VAANI · वाणी SETU · सेतु DARK + LIGHT VERSIONS BILINGUAL LOCKUPS	STATUS ● Blocked on Phase 3 GATE Approval required before Phase 5
PHASE 05	Working System Files Production-ready outputs from the approved identity. All formats needed for actual use in product, web, and print. Developers and designers can work directly from these without needing to interpret anything. SVG MASTER FILES TRANSPARENT PNG EXPORTS MONOCHROME EXPORTS TYPOGRAPHY SPEC SHEET CSS DESIGN TOKENS COLOR VARIABLES FONT USAGE GUIDE LOCKUP SPACING GUIDE APP / FAVICON VARIANTS WEB USAGE REFS BRAND GOVERNANCE SHEET	STATUS ● Blocked on Phase 4 NOTE No production files until identity is locked
PHASE 06	Vision System File Finally — update the Vision canvas and composition plan using the finalized identity language. The vision artifact should speak the same visual language as the approved identity system. Not before. UPDATED VISION CANVAS IDENTITY-ALIGNED COMPOSITION PLAN SYSTEM OVERVIEW ARTIFACT	STATUS ● Blocked on Phase 5 NOTE Final phase — vision speaks identity, not the reverse

⊖ DO NOT

- Generate symbols or icons without explicit instruction
- Use literal metaphors (flow lines, broadcast bars, connectivity nodes)
- Make Dhara / Vaani / Setu feel like separate products
- Add decorative marks to the AyuVinc wordmark
- Proceed to next phase without approval
- Use Devanagari as subtitle or translation of English
- Make anything feel like startup branding
- Generate icons for the sake of having icons

✔ DO THIS

- Typography and spacing as the primary identity tool
- One shared geometric language across all modules
- Devanagari as co-equal cultural continuity layer
- Minimal differentiation between modules — same DNA
- Institutional confidence through restraint
- Think: metro systems, sovereign institutions, architectural firms
- Show concept first, build on approval only
- Infrastructure feel: modular, not fragmented

03 — DECISIONS TO DATE

D1	AyuVinc master brand — text only, no symbol mark, no geometric icon. Power from typography and spacing alone.	● LOCKED
D2	AyuVinc stays English-only. Only the infrastructure modules (Dhara, Vaani, Setu) carry bilingual EN + Devanagari lockups.	● LOCKED
D3	Devanagari script: Noto Sans Devanagari is directionally acceptable. Final weight and pairing TBD in Phase 1.	● PROVISIONAL
D4	Both scripts at equal color and visual weight — co-equal layers, not translation hierarchy.	● LOCKED
D5	Dhara strata-line mark and Vaani broadcast-bar mark — both rejected. Too literal. Superseded by Phase 3 shared geometry direction.	● REJECTED
D6	Color system: navy #090d18, off-white #f5f4f0, teal oklch(62% 0.10 195), sage oklch(65% 0.07 155). Carried forward.	● LOCKED
D7	Monochrome light-ground versions required for all final lockups (print, clinical environments).	● LOCKED

04 — REFERENCE TONE

THE IDENTITY SHOULD FEEL LIKE

Modern metro systems and transit authorities

Sovereign institutions and national infrastructure

Premium architectural and engineering firms

Future-facing public infrastructure identities

Globally sophisticated, unmistakably rooted

IT MUST NEVER FEEL LIKE

Ayurveda or wellness packaging

Spirituality or cultural heritage branding

SaaS startup with an icon and a tagline

AI healthcare product branding

Ethnic or ornamental design

Say "go" on Phase 1 and I will begin the typographic system.
No execution proceeds without your approval at each gate.

PHASE 1 READY
